

## PRODUCT BULLETIN

### Antifreeze Radiator Additive

PRODUCT #817

**CAM2 Magnum Antifreeze Radiator Additive** is a low silicate formulation that provides outstanding corrosion protection. In addition, **CAM2 Magnum Antifreeze Radiator Additive** contains an advanced additive inhibitor system to provide broader range protection than most coolants. This includes ingredients designed to protect your engine and water pump from overheating, rust and corrosion.

#### FEATURES

- Protects from overheating and boil over
- Protects from boiling up to 265F (129C)
- Prevents rust, corrosion and scaling to promote better heat transfer from engine to radiator.
- Lubricates water pump seals and moving parts.
- Pre-mixed and ready to use

All CAM2 Antifreeze Premix products are manufactured using only deionized water.
